British Airways Announces Plans for London Sustainable Jet Fuel Plant
February 19, 2010
Source: Clean Edge News

British Airways, in partnership with the Solena Group, has announced plans to establish a sustainable jet-fuel plant and plans to use the low-carbon fuel to power part of its fleet beginning in 2014.

According to the company, the new fuel will be derived from waste biomass and manufactured in facility that can convert a variety of waste materials, destined for landfill, into aviation fuel.

The self-contained plant, likely to be sited in east London, will reportedly be able to convert 500,000 tons of waste per year into 16 million gallons of green jet fuel through a process that offers lifecycle greenhouse gas savings of up to 95 per cent compared to fossil-fuel derived jet kerosene.

British Airways says this volume of fuel would be more than twice the amount required to make all of the company's flights at nearby London City Airport carbon-neutral.

The project will make further savings in greenhouse emissions by reducing the volume of waste sent to landfill, avoiding production of methane, and generating 20MW of electricity a year from renewable sources.

British Airways has signed a letter of intent to purchase all the fuel produced by the plant, which will be built by the Solena Group Inc. an advanced bio energy and bio fuels company based in Washington DC.

For companies high tech and clean tech, our business is the art of telling your story.

The Free e-Letter on Clean Technology From Clean Edge

Welcome to CLEANWATCH. Each issue offers the latest news, events, and other resources on clean energy, transportation, water, and materials.

Don't Think of a Solar Panel
by Ron Pernick

For all the recent discussion about climate and carbon, I think we're missing a critical point. Climate is only one part of the larger global economic, energy, and environmental picture. To accurately depict the challenges and opportunities that we face, both politically and economically, we shouldn't be focused solely on climate.

Apply for Autodesk Clean Tech Software Grant

Clean Edge and the Clean-Tech Investor Summit have joined forces with Autodesk to help accelerate your company's development. Autodesk is providing free* software grants worth up to \$150,000 each to the most promising clean-tech startups in North America through its Clean Tech Partner Program.

Autodesk Clean Tech Partner Program offers Free Software Grants
